

Paul Van Liedekerke, Phd.

INRIA Paris-Rocquencourt & Sorbonne Universités UPMC Paris 6, France

Phone: +33 (0)1 80 49 43 18

Email: paul.van_liedekerke@inria.fr

Personal

Nationality: Belgian

Marital status: unmarried, 2 children

Email: Paul.VanLiedekerke@gmail.com

Profile

- **Ingénieur Expert - Research Associate** at **INRIA** de Paris, project “*Mamba*”. Code development and modeling the behavior of soft matter (fluids and solids) and biological Systems (cells, tissues). Physics-based methods and numerical algorithms. Agent-based models.
- **Visiting professor**, K.U.Leuven, Belgium.

Education

- **PhD, Applied Biological Sciences** (K.U.Leuven, Belgium, 2007) - modeling of granular flow. Title : "Study of the granular fertilizers and the centrifugal spreader using Discrete Element Method (DEM) simulations "
- **Post graduate in Environmental Sciences and Technologies** (University of Ghent, 2001). Title : "A statistical study to relate physical parameters and psychological effects in the experience of noise".
- **Master of Physics**, option experimental physics (University of Ghent, Belgium, 1999). Title : "A study of the atmospheric dispersion model HYSPLIT for Kr-85".
- Lower education (lycée): “Industriële Wetenschappen”, Koninklijk Technisch Atheneum Herzele, Belgium (1995).

Experience

- 01/12/2012- now (INRIA):
 - Development of **agent-based** models for (multi-)cellular systems at different scales for investigation of mechanical stress in tumor spheroids and tissues, growth of avascular tumors, mechano-transduction, tissue organization and regeneration. Model validation (collaboration with experimental groups).
 - Co-developer of TiSim, a C++ software project for the modeling multi-cellular systems and tissue quantification (<http://www.msystbio.com/>).
 - (2012 - 2013) INRIA responsible for the European research initiative SEURAT (EU- FP7), to reduce animal testing for new drugs (<http://www.notox-sb.eu/>). Representative for several project meetings
- 2011: **Scientific visitor at EMI Fraunhofer Institute, Freiburg, Germany.** To study impact and damage caused by shock waves on cells and tissues.
- 30/04/2011- 01/12/2012: **Senior Postdoc** at KULeuven: Modeling of the draining properties of complex viscoelastic fluids under free surface conditions. Optimization and product improvement. Bilateral project with Dutch company MOBA.
- 2007-2011: **Postdoc** at KULeuven: Development of a multi-scale modeling framework for the mechanics of cells and tissues. Internal KULeuven project "Multi-scale Mechanics of Fruit Tissue".
- 2006-2007: **Research Engineer** at KULeuven: Study for the improvement of granular flow spread by a new conceptual spinning disc fertilizer spreader. (Bilateral project with BASF, US patent 649967).
- 2001-2006: **Research Engineer and Phd-student** at KULeuven: Model development, conducting simulations and experiments for granular matter flow using the Discrete Element method (DEM). Modeling of multi-body dynamics and contact mechanics.

Teaching

- 2013-2017: Visiting professorship at the KULeuven for the course "Modeling of Tissue Physiology" (Prof. H. Ramon and Prof H. Van Oosterwyck, KULeuven, Belgium).
- 2015-2016: 4 contact hours in master course "Towards the systems biology of multi-cellular tissues: Single-cell-based models and beyond" (Prof. D Drasdo, Paris IV - Jussieu).
- 2008-2009: Teaching assistant for the course "Control engineering" - exercises (by Prof. H. Ramon, KULeuven).

Languages

- Dutch (mother tongue)
- English (advanced)
- French (very good)
- German (basic understanding, took a few classes)

Grants

- **2012 - Co-promotor** of FWO (Fonds voor Wetenschappelijk Onderzoek - Vlaanderen) project : "A multilevel, integrative approach for the study of cellmatrix mechanics and mechanotransduction during cell adhesion" (550.000 Euros).

Awards

- **Best Poster Award:** Odenthal, T.; Smeets, B.; Van Liedekerke, P.; Tijssens, E.; Oosterwyck, V. and Ramon, H. A DEFORMABLE CELL MODEL AND ITS APPLICATION TO INVESTIGATE INITIAL CELL SPREADING International Symposium on Computer Methods in Bio-mechanics and Biomedical Engineering., 2013.

Technical skills

- **Computer**
 - Programming: C/C++ and libraries (Boost, CGal), Python, Git.
 - Matlab, Scilab, Paraview, Maple.
 - GNU/Linux, MS Windows and related programs (Office, Kile,...).
 - Deal.II, a C++ open source FE package (www.dealii.org)
 - Notices of parallel computing: OpenMP, notices of MPI and GPU/Cuda implementations. I implemented a parallel version of Smoothed Particle Hydrodynamics in LAMMPS, a molecular dynamics simulator (http://lammps.sandia.gov/doc/PDF/SPH_LAMMPS_userguide.pdf).
- **Numerical methods**
 - Discrete Element Method (DEM), Smoothed Particle Hydrodynamics (SPH), Finite Element Method (FEM), Finite Differences (FD).
 - Coarse-graining techniques, reaction-diffusion equations.
 - Stochastic differential equations, Brownian motion.
- **Scientific reporting (in English)**
 - Writing of scientific reports and giving oral presentations for government institutions and private companies.
 - Writing of international reviewed journal papers and book chapters.
 - Scientific dissemination to public and private partners.
- **Conduction of experiments**
 - Experimental design.
 - Construction of experimental equipment to validate models (during Phd and Postdoc).
 - Knowledge of small electronic devices, motors, cameras, fast-frame camera.

Interests

Professional

- Modeling and study of the behavior of (living) soft matter, granular matter, fluids.
- Mechanics and adhesion of arbitrary shaped bodies and biological cells, mechano-transduction.
- Validation and hypothesis testing of *in silico* models with experimental data.
- PDEs and Numerical methods: Discrete Element Method (DEM) , Smoothed Particle Hydrodynamics (SPH), Finite Element Method.
- Multi-scale models, coarse-graining techniques, reaction-diffusion equations.

Personal

- Computers, sensors and electronics: *Raspberry Pi* projects.
- Weather forecast models and climate change.
- Sports (cycling).

Collaborations

- **01/07/2016- now:** Experimental biology group of Frederic Lemaigre (Institut de Duve, Belgium): model for study of the development bile ducts in embryo's.
- **01/07/2012- now:** Experimental physics group of prof. Pierre Nassoy (Institute Optique, Bordeaux) on the development of the novel "Cellular Capsule Technique", to analyze the mechanical behavior and fate of tumor cells under confinement using experimental and numerical techniques.
- **01/07/2012- now:** Biomechanics group of prof. Hans Van Oosterwijck (KULeuven) on the development of a computational ECM model to predict mechanical stresses during angiogenesis. Supervision of PhD student Tommy Heck.
- **01/07/2012- now:** Experimental group of P. Chavrier (Institute Curie, Paris) studying invasion patterns in *in-vitro* spheroids embedded in ECM.
- 30/04/2011- 01/12/2012: R&D of company MOBA, The Netherlands.
- 2007-2011: Department of Computer Science, K.U.Leuven (Prof. D. Roose).
- 2006-2007: R&D of company BASF, Germany.
- 2001-2006: R&D of company AMAZONE WERKE, Germany and DELVANO, Belgium.

Supervising of PhD and master students

PhD students

- Assessor of Tommy Heck (Department of Mechanical Engineering, K.U.Leuven). Study on the mechanical interaction between cells and ECM. Title to be assigned, phd degree to be obtained in 2017.
- Co-promotor of ir. Bart Smeedts (Department of Biosystems, K.U.Leuven). "Quantitative study on the influence of process design on the biophysical microenvironment in 3D cell cultures", phd degree obtained in 2015.

- Assessor of Yaidel Reyes Lopez (Department of Computer science, K.U.Leuven). "MPI Parallelization of particle based codes", phd degree to be obtained in 2014.
- Co-promotor of Dr. Tim Odenthal (Department of Biosystems, K.U.Leuven). "Development of an individual cell based model of cell aggregates in bone tissue engineering", phd degree obtained in 2013.
- Assessor of Dr. Jurgen Vangeyte (Department of Biosystems, K.U.Leuven), thesis title "Development and validation of a low cost technique to predict spread patterns of centrifugal fertilizer spreaders.", phd degree obtained in 2013.
- Assessor of Dr. ir. Pieter Gyhysels (Department of Computer science, K.U.Leuven). "Multi-scale modeling of viscoelastic plant tissue", obtained 28 November 2010.

Master students

- supervisor of Ir. Fadil Alitinisik (Master in BIO-Engineering), Master thesis title "Determination of cell mechanical properties by micro-pipette aspiration", degree obtained in 2011.
- supervisor of Ir. Bart Smeets (Master in BIO-Engineering), Master thesis title "Individual-based models of yeast colonies: a discrete element approach", degree obtained in 2010.

Scientific evaluations

- Member of HCERES evaluation committee for the research unit "BIOSP" , INRA, Avignon (France), 10/01/2017.
- Reviews for international journals: *Physical Biology, Microfluidics and Nanofluidics, Journal of Rheology, Journal of Theoretical Biology, Computer Physics Communications, Applied mathematical Modeling, Engineering Analysis with Boundary Elements, Medical Biological Engineering and Computing, Powder Technology, Biosystems Engineering.*

Organization of events and memberships

- Co-organizer of a mini-symposium (cells and tissues modeling) in the 5th Particles conference in 2017, Hannover, Germany.
- Co-organizer of a mini-symposium (cells and tissues modeling) in the 4th Particles conference in 2015, Barcelona, Spain.
- Co-organizer of LMCC Workshop on "Fundamentals and applications of SPH in science and engineering" , October 25-26, 2010, Leuven, Belgium.
- Co-organizer of 1st international symposium on centrifugal fertilizer spreading, 15-16 September 2005, Leuven, Belgium.
- Membership of "SPHeric", the SPH European Research Interest Community. (<http://spheric-sph.org>)
- Membership of "Lysim", network of twenty German centers and institutions brought together by a funding program of the German Government. (www.lisym.org)

Attended courses (past)

- Colmot10: International Workshop on Statistical Physics and Biology of Collective Motion, Max Planck Institute Dresden, Germany, 8-12 November, 2010 (Poster presentation)

- Course on Nano- and Micro-Mechanics of Living Cell Adhesion, CISM Udine, Italy, June 14-18 (2010).
- Short course on particle based methods, CIMNE, Barcelona, Spain, May 14-1 (2008).
- 39 th Spring school SOFT MATTER, Julich, Germany (2008).

Publications

International journals

1. **Van Liedekerke P.**, J. Neitsch, T. Johann, E. Warnt, and D. Drasdo (2017) Quantifying mechanics and growth of cells in tissues using high resolution computational models (*preprint*).
